

Afraid of the Dark?

The Dragon Delta Spider-eye L.E.D.

Est. 1978

The Dragon range was introduced to the U.K. government in the late 1970s and since then has become the portable light of choice for the Police, Fire, M.O.D. and emergency services around the world. Fresh on the market, offering a powerful and unmatched searchlight, we set the benchmark for all portable lighting products.

Today we are still delivering groundbreaking products for those users who require the utmost reliability and quality. Civil Defence Supply Ltd is proud to introduce the new rechargeable Dragon Delta Spider-eye L.E.D., which is already proving to be the next big thing on the portable lighting market.

The new Dragon Delta Spider-eye, with both high and low beams, brings state of the art technology to a trusted design. Eighteen individual L.E.D.s produce an intense beam of bright white light, equivalent to 135,000 candle power. This power, combined with our ultra-white technology, blows standard halogen bulbs out of the water. L.E.D.s draw considerably less power than halogen bulbs, meaning the new Dragon Delta Spider-eye lasts for up to two and a half hours on high beam and five hours on low, no mean feat for such a powerful searchlight.

Old vs New

Despite introducing a new version of the Dragon Delta, we have ensured that all accessories from previous models are still compatible. There are currently over twelve-thousand Deltas in operation around the globe and we owe the success of the Delta to our customers. Therefore, as a thank you, we have gone to great lengths to ensure that all Dragon lights can be easily upgraded from halogen to L.E.D..

Demonstration of the Dragon Delta Spider-eye on high beam across our business grounds.

SPECIFICATION	
POWER HIGH BEAM	135,000 CP
POWER LOW BEAM	68,000 CP
RANGE	450 METRES
WEIGHT	3.5 KG
BATTERY TYPE	NiCad , 4.3 A/h, 12V
RUN TIME	HIGH: 2.5 HR, LOW: 5 HR
DIMENSIONS	L: 283mm, H: 162mm, W: 163mm

Comparison of Halogen bulb (Left & Yellow) and L.E.D. Array (Right & White).

Of course, with upgrades come fantastic benefits. These include ultra-whitelight and a wider beam, as shown above, reduced running temperatures and a six-month warranty.

As all our lights are manufactured to ISO 9001:2000 standards, and have a water ingress rating of IP65, you can rest assured that they will perform in even the harshest of environments. Due to this, our lights are trusted in extremes of heat and cold, at IED sites and on the front line.

Officer in bomb disposal training using a Dragon Delta.

L.E.D. to I.R.

For our military clients, all our searchlights can be easily converted to emit I.R. for use during covert operations. Civil Defence Supply Ltd has created a unique filter that, when placed over the lens, blocks out any visible light and transmits only I.R..
